

3D MULTI-CAMERA SYSTEM FOR INDUSTRY4.0

« SELLING » STATEMENT:

A real-time coupling of 3D and thermal images for automated defects detection in fast industrial processes

Demonstration set-up

Capture of images

KEY FEATURES

Automated correlations between physical defects and temperature

Using both thermal and 3D cameras

Proven feasibility on some customers: automation of the measuring of the production quality

Metallurgic

Bread production

Important markets targeted

Any mass industry where heat is involved for producing their products and that can affect the dimensions of the product
